SCHEDULE H
Dr. IAN DUNBAR'S
AGGRESSION SCALE

ASSESSMENT OF THE SEVERITY OF BITING PROBLEMS BASED ON AN OBJECTIVE EVALUATION OF WOUND PATHOLOGY	
Level 1	Dog growls, lunges, snarls-no teeth touch skin. Mostly intimidation / threatening behaviour
Level 2	Teeth touch skin but no puncture. May have red mark/minor bruise from dog's head or snout, may have minor scratches from paws/nails. Minor surface abrasions or lacerations.
Level 3	Punctures one to three holes, single bite. No tearing or slashes. Victim not shaken side to side. Bruising
Level 3.5	Multiple Level 3 bites.
Level 4	Two to four holes from a single bite, typically contact/punctures from more than canines, considerable bruising. Black bruising, tears and/or slashing wounds. Dog clamped down and held and /or shook head from
Level 5	Multiple bites at Level 4 or above. A concerted, repeated attack causing severe injury.
Level 6	Any bite resulting in death of an animal

This Scale has been developed by Dr. Ian Dunbar PhD. BVetMed, MRCVS, of Berkeley California. From his studies Dr. Dunbar has been able to separate and classify bites into a generalized six level assessment protocol. This Scale is used as a standard throughout the world in canine aggression investigations and behavior assessment.

"Inhibitions are the mechanisms which compel an animal to interrupt an action in the middle of a sequence."(i)

"Good bite inhibition does not mean that your dog will never snap, lunge, nip, or bite. Good bite inhibition means that should the dog snap and lunge, his teeth will seldom make skin contact and should the dog's teeth ever make skin contact, the inhibited "bite" will cause little, if any, damage."
